```
This invention relates to a novel method for identifying disease targeting peptides. The method comprises exposing a sample from an organ, tissue or cell type of interest, to a phage display library and recovering phage bound to the sample (the phage expresses targeting opepides). The peptides identified by the method of the invention may nate cytostatic, immunosuppressive, anti-inflammatory, antiarthritic, antidiabetic, antidiametery, antiarthritic, antidiabetic, antidiametery and antiviral cativities. The methods and composition are useful for identifying activities and one or more receptors for a targeting peptide. The targeting peptides and one or more receptors for a targeting peptide. The targeting peptides and one or more receptors for a targeting peptide. The targeting peptide way also be used for selective delivery of therapeutic agents, including gene therapy vectors and fusion proteins, to specific organs, tissues, or cell types in subject. The targeting peptide may also be used for treating diseases such as diabetes mellitus, inflammatory diseases, carbitits, atherosclerosis, cancer, autoimmune diseases, bacterial and viral infections and Hodgkin's disease. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAR95832-R95844 represent the altered fragments of the insulin-like growth factor-1 (IGF-1) muteins of the invention. This sequence represents the N-terminal residues 63-67 of the IGF-1 mutein C67. The wild type IGF-1 sequence is represented by AAR87744. These muteins contain a non-native cystein residue substituted for one of the first (or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             last) four amino acid residues of this sequence. Polyethylene glycol (PEG) conjugates are then created from the muteins, where the PEG is attached to the non-native cystein residue. The PEG is attached to the face cystein through an activating group selected from maleimide, sulphydryl, thiol, triflate, tresylate, aziride, exirane or 5-pyridyl. The conjugates can also comprise a second polypeptide attached to the PEG. The conjugates may be used for the treatment of IGF associated conditions, such as dwarfism, diabetes, periodontal disease or osteoprosis. Advantages associated with these conjugates are that they have a higher molecular weight, and an extended circulating half life in comparison to wild type IGF.
                           Insulin-like growth factor-1; IGF-1; polyethylene glycol; PEG; triflate; PF1/PEG conjugate; maleimide; sulphydryl; thiol; tresylate; aziride; exirane; 5-pyridyl; therapy; dwarfism; diabetes; periodontal disease; osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Endothelial cell-binding peptide, Genetic display package,

motif. The peptide may be identified using the method of the invention. The presult sequence represents an endouterating a peptide having a relected biological activity. The method comprises displaying the selected biological activity. The method comprises displaying the peptides on the outer surface of a genetic display package to create a peptide display library, and using affinity selection to enrich the population display packages for those containing peptides which have desired specificity to the target cell. The method may be used in the selection of peptides having effects on cell proliferation, differentiation, death and migration, as well as in the identification of peptides which have anti-proliferative activity with respect to one or more types of cells, peptides with (anti-) angiogenic activity, anti-infective peptides which are active as anti-fungal or anti-infective peptides which are active as anti-fungal or anti-infective peptides which are active as anti-fungal or anti-infective peptides which are active more types of cells, peptides which are active and ligands for orphan receptors for which no ligand is known. Moreover, the method may be used to test functional ligand-receptor or ligand-ion channel interactions for cell surface-localized receptors and channels
cell proliferation; cell differentiation; cell death; cell migration; angiogenic activity; infective peptide; anti-fungal; anti-bacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                  The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell peptide or polypeptide which includes one or more endothelial cell cell binding protein (EGBP) sequences. A peptide of the invention has anticumour, cytostatic, vasotropic, antipsoriatic, dermatological, ophthalmological, antidiabetic, antiarthritic, vulnerary, antiulcer, antimidramatory, antidiabetic, antiarthritic, vulnerary, antiulcer, antidiamatory, antidiapetic, antiarthritic, vulnerary, antiulcer, antidiamatory, antidiapetic, antiarthritic, vulnerary, antiulcer, antidiamatory, tedicing the proliferation and/or migration of is useful for promoting the cells with an EGBP antagoniet, which is preferably the peptide, to promote proliferation and/or migration of the created cells, and for reducing or promoting angiogenesis, by treating an endicament for promote or reduce angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing a are useful for promoting or reduce angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing an angiogenesis. ECBP sequences are useful to alter the infectivity spectrum of a viral particle. The present sequence represents an ECBP of the

New generically described peptides are disclosed which are NS3 protease inhibitors useful for treating hepatitis C virus (HCV) infection. The present sequence represents a specific example of these peptides. In a test to determine inhibition in a NS3 protease/NS4A cofactor peptide radiometric assay, this peptide had an IC50 value of 92 micromolar
                                                                                                                   Tsantrizos Y;
                                                                                                                                                                                                                                                                          σţ
                                                                                                                                                                                                                                                                          New peptides inhibitors of NS3 protease - useful for treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 15
US-10-286-457-36
Sequence 36, Application US/10286457
Sequence 36, Application US/10286457
Publication No. US20030166004A1
GENERAL INFORMATION:
APPLICANT: USKO GYURLS et al.
TITLE OF INVENTION: ENDOTHELIAL-CELL BINDING PEPTIDES FOR DIAGNOSIS AND THERAPY
TITLE NO FUNCANTION: UNDER: US/10/286,457
CURRENT FALIAND BATE: 2002-11-01
PRIOR PELICATION NUMBER: 60/3348022
PRIOR FILING DATE: 2001-11-01
PRIOR FILING DATE: 2001-11-01
SOFTWARE: PATENTIN VERSION 3.1
SOFTWARE: PatentIn version 3.1
LENGTH: 5
                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

Rostsynaptic short-chain neurotoxing from Pseudonaja textilis: cDNA
TPOSTSYNAPTES on and protein characterization.";

Eur. J. Biochem. 265:982-989(1999).

-! FUNCTION: Lethal neurotoxin, binds and inhibits nicotinic
acetylcholine receptors (nACR).

-! FUNCTION: Lethal neurotoxin, binds and inhibits nicotinic
c:- FUNCTION: Lethal neurotoxin, binds and inhibits nicotinic
c:- FUNCTION: Lethal neurotoxin, becreted.

-! TISSUE SPECIFORITY: Mac6454; METMO-PELetcrospray.

-! ANS PRETROMETRY: Mac6454; METMO-PELetcrospray.

-! SIMILARITY: Belongs to the snake toxin family.

InterPro; IRRO03571; Stake toxin.

R PROSITE; PS00272; SNAKE_TOXIN; PARTIAL.

         -!- SUBCELLUIAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- MASS SPECTAMETRY: MW-246.4; METHOD-MALDI.
-!- MANIZARITY: Belongs to the short scorpion toxin family. Potassium channel inhibitor subfamily.
GO; GO:0005576; C:extracellular; NAS.
GO; GO:001970; F:potassium channel inhibitor activity; IDA.
GO; GO:001970; F:corn activity; IDA.
GO; GO:001970; F:corn activity; IDA.
FOOTE: PROSITE: PSOIL138; SCORP.SORP.TOXIN; PALSE NEG.
TOXIN; Neurotoxin; Ionic channel inhibitor.
Potassium channel inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Natl. Acad. Sci. U.S.A. 79:6489-6493 (1982).
-!- FUNCTION: After binding acetylcholine, the AChR responds by an extensive change in conformation that affects all subunits and leads to opening of an ion-conducting channel across the plasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Pentamer of two alpha chains, and one each of the beta, delta, and gamma chains.
                                                                                                                                                                                                                                               INTERACTION WITH CA(2+)-ACTIVATED K(+)
CHANNELS (POTENTIAL).

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine WPI; 2001-442248/47.

Example 1; Page 91; 102pp; English. from an er

The sequence represents Human VEGP (vascular endothelial growth factor) amino acids Gln113-Asp1353, used to replace the C-terminal 23 residues of VEGP-D to make a hybrid theoretical molecule for 3 dimensional modelling. The sequence is used in a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one

```
amino acid deleted prior to cyclisation are used to interfere with an angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumnour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, corresponded in induced neovascular sequelae, corresponded in induced neovascular sequelae, corresponded in induced neovascular sequelae, propried in a condition characterised by permeability in a mammal (the mammal has a condition characterised by pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VBGF, VBGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 23 AA;

Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them. N-PSDB; AAS12810

Claim 9; Fig 7D; 261pp; English.

The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that

modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from preexisting ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell regulatory proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs. for the treatment of disease

This invention describes a method for the production of a novel cell specific multivalent protein (MVP). The invention also describes (1) a nucleic acid construct, which encodes an MVP; (2) a bacterium, yeast or mucheler caid construct of (1) is introduced; (3) the MVP bound to a vector; (4) production of an MVP; (5) an MVP comprising a scFV with a binding site for the adenoviral fibre protein or COD3 molecule and two VEBF units, bound by a peptide linker; and (6) a complex comprising at least two MVPS as above (in which each single ligand can be 0=1). The MVP, optionally bound to a vector, is useful for production of a remedy to treat cells outside tissue by dressings for production of a remedy to treat cells outside tissue by dressings for skin, mucus, nervous systems, inner organs, hematopoletic systems, immune systems, musculature, support tissues or joints and to immunize to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAW53383
                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a method for the production of a novel cell specific multivalent protein (MVP). The invention also describes (1) a nucleic acid construct, which encodes an MVP; (2) a bacterium, yeast or (3) the MVP bound to a vector; (4) production of an MVP; (5) an MVP comprising a scFV with a binding site for the adenoviral fibre protein or CD3 molecule and two VEBF units, bound by a peptide linker; and (6) a complex comprising at least two MVPS as above (in which each single ligand can be 0=1). The MVP, optionally bound to a vector, is useful for production of a remedy to treat cells outside tissue by desssings for skin, mucus, nervous systems, inner organs, hematopoietic systems, immune systems musculature, support tissues or joints and to immunize to

peptide from the present invention. The present invention describes a tumour metastasis inhibitor consisting of vascular endothelial cell growth factor (VEGF) inhibitor. In an example, anti-vascular endothelial cell growth factor polyclonal antibody was produced, and an antibody was carried out. The hybridoma was selected and cultured. The monoclonal antibody was identified. A peptide corresponding to part of the monoclonal antibody was identified. A peptide corresponding to part of the amino acid sequence of vascular endothelial cell growth factor was prepared. A peptide reacting with the monoclonal antibody was identified. The amino acid sequence of vascular endothelial cell growth factor was prepared. A peptide reacting with the monoclonal antibody was identified. The monoclonal antibody was identified. The can be effectively applied in metastasis inhibitor. The drug can be effectively applied in metastasis
                     present sequence represents a vascular endothelial cell growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vascular endothelial growth factor; VEGF; vascular permeability factor; VPF; inhibition; malignant tumour; benign tumour; liver cirrhosis; inflammation of peritoneum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Amino acid sequence of a vascular endothelial growth factor/vascular permeability factor (VEGF/VPF) peptide used in the method of the invention as an inhibitory agent. The inhibitory agent is used for the treatment of retention of body fluid during disease states, e.g. malignant and benign tumours, inflammation of peritoneum, ascites, and
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Сарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        An inhibitory agent for the re-retention of body fluid - useful for treating this side-effect of associated disease states.

                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a tumour metastasis inhibitor peptide from the present invention. The present invention describes a tumour metastasis inhibitor consisting of vascular endothelial cell growth factor (VEGF) inhibitor. In an example, anti-vascular endothelial cell growth factor polyclonal antibody was produced, and an antibody.

Droducing cell was prepared. A myeloma cell was prepared and cell fusion was carried out. The hybridoma was selected and cultured. The monoclonal antibody was collected and purified. The reaction site of the amino antibody was identified. A peptide corresponding to part of the amino cold sequence of vascular endothelial cell growth factor was prepared. A peptide reaction was into the amino peptide reacting with the monoclonal antibody was used as a tumour metastasis inhibitor. The drug can be effectively applied in metastasis therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tumour metastasis inhibitor - consists of vascular endothelial cell
growth factor inhibitor,
                                                                                                                                                                                                                                                                          Tumour metastasis inhibitor - consists of vascular endothelial cell
growth factor inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

```
The present sequence represents a peptide fragment from human vascular permeability factor (VPE), which is used in the example of the present invention to produce a monoclonal antibody against human VPE. The monoclonal antibody produced was designated MV 813. The monoclonal antibody was used in a novel carcinostatic of the present invention, comprising an anti-vascular endothelial growth factor (VEGF)/VPF antibody (Ab), and mitomycin or cisplatin. The carcinostatic improves the effect
                                                                                                                                                                                                         Carcinostatic comprises anti-vascular endothelial growth factor antibody - and mitomycin or cisplatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Carcinostatic comprises anti-vascular endothelial growth factor antibody - and mitomycin or cisplatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a peptide fragment from human vascular permeability factor \{VPF\}, which is used in the example of the present invention to produce a monoclonal antibody against human VPF. A thermotherapy method has been developed which involves destroying the tumour site by hot temperature and administering vascular endothelial cell growth factor (VBGP)/ vasopermeability factor (VPR) antagonist. The method is useful for the treatment of various cancers. The VBGR/VPF antagonist has cytostatic activity and is a tumourigenesis inhibitor. Proliferation of the tumour is suppressed effectively. AAY57612 to AAY57614 represent specifically claimed human VBGF/VPF peptides. AAX57615
                                                                                                                                                                                                                                                                                                                                                                Thermotherapy for treatment of various cancers - involves destroying the tumor site by hot temperature and inhibiting angiogenesis effect by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó
                                                                                                                                                                                        ;
       monoclonal antibody produced was designated MV 833. The monoclonal antibody was used in a novel carcinostatic of the present invention, comprising an anti-vascular endothelial growth factor (VEGF)/VPF antibody (Ab), and mitomycin or cisplatin. The carcinostatic improves the effect of the known anti-tumour agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAW97381-82 represent antagonist of vascular endothelial growth factor (VEGF)/vascular permeability factor (VPF). The peptides are used in an anticancer agent, which is used to inhibit growth of a tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antagonist; vascular endothelial growth factor; VEGF;

A thermotherapy method has been developed which involves destroying the tumour site by hot temperature and administering vascular endothelial cell growth factor (VPGF)/ vasopermeablility factor (VPGF) antagonist. The method is useful for the treatment of various cancers. The VEGF/VPF antagonist has cytostatic activity and is a tumourigenesis inhibitor. Proliferation of the tumour is suppressed effectively. AMS7615 to AANS7614 represent poscifically claimed human VEGF/VFF peptides. AMS7615 to AANS7619 represent human VEGF-121 peptides used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is a fragment of human vascular endothelial cell growth factor (VBGF)/vessel permeability factor (VPF). The peptide is used to identify the site at which an anti-VBGF antibody binds to VBGF. The antibody is used in the method of the invention, which relates to the use of an anglogenesis inhibitor. The inhibitor contains a VBGF antagonist (preferably the anti-VBGF antibody) and minocycline. The anglogenesis inhibitor can be used as a therapeutic agent against tumours. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vascular endothelial cell growth factor; vessel permeability factor; VPF; angiogenesis inhibitor; minocycline; tumour; diabetic retinopathy; intraocular angiogenic disease; aging muscular degeneration; psoriasis; rheumatoid arthritis; Kaposi's sarcoma; cancer; arteriosclerosis; VEGF.
                                                                    Thermotherapy for treatment of various cancers - involves destroying the tumor site by hot temperature and inhibiting angiogenesis effect by VEGF/VPF antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Angiogenesis inhibitor for treating tumors and cancers - contains vascular endothelial cell growth factor or vessel permeability factor antagonist and minocycline as active ingredient.
                                                                                                                                                                                                                                                                                                                                                                                                       54.9%; Score 73; DB 3; Length 12; 100.0%; Pred.
